## LIFT MAGNET GUIDELINES:

**Surface Condition:** Magnet face and load surface must be clean and smooth. Capacity ratings listed are on flat, clean and polished steel plate with magnet face in full contact with the load surface. Paint, coatings, scale or other materials between the load surface and the magnet will adversely affect the holding power of the magnet.

**Material Thickness:** Lifting capacity is lower on thinner materials. Contact dealer for more capacity information.

**Material Composition:** Magnet capacity is based on lifting low carbon steel. Other materials may reduce lifting capacity.

**Load Size and Position:** Thin sheets, rough and irregular surfaces, odd shapes and scale all affect holding power adversely and must be considered in establishing a safety factor. The magnet must be positioned on the load center of gravity. Tilted or unbalanced loads significantly affect the holding power of the magnet.

**Capacity:** Maximum attractive force is approximately twice the rated lifting capacity. Capacity ratings listed are on flat, clean and polished steel plate with magnet face in full contact with the load surface. The above factors should be taken into account when determining appropriated safety factors for a given load. A minimum of 2 to 1 safety factor must be applied based on the actual breakaway force for a given load. Refer to ASME Standard B30.20 for inspection and operating procedures of Close Proximity Operated Lifting Magnets and read Manufacturers' Operating Manual before using magnet.

## APL Series

- Hands free activation.
- Great for use where operator access is limited.

# FILE CABINETS & BOOKCASES

## Lateral Files

HLPL3672L60

Heavy gauge welded steel construction ensures rigidity and durability for many years of use. Files will accommodate letter or legal hanging files. A mechanical interlock system prevents more than one drawer from opening at a time to eliminate the danger of tipping. Drawers and shelves glide on heavy duty, full extension ball bearing suspensions. A single lock controls all openings. Locks are core removable and master keyed (order keys separately). Each opening is equipped with side-to-side hang rods for the folders. Optional front-to-back rods (H15CR) are available.

Drawers and doors have easy grip, full-width pulls with recessed label holders. Four leveling glides allow the unit to be leveled on uneven floors. To reduce risk of tipping, order two drawer lateral files with counterweights (suffix "W") for all applications except under a work surface in a workstation. Five and six-high units have retractable door(s) with roll-out drawer on top opening(s). Choose an optional laminate top to create a work surface on two and three-high files. Specify Oak or Walnut. Durable powder-coat paint finish available in five colors. FOB Shipping Point.

## Vertical Files

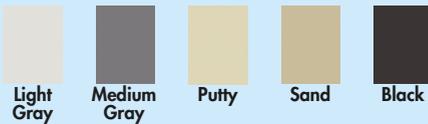

HV285C-MF

Tennsco vertical files are as attractive as they are dependable. Contemporary design features full-width recessed handles with plastic label holders. Drawers operate quietly and effortlessly on steel ball bearing suspensions. All hanging files in a drawer are visible as drawers extend fully on the three-section telescoping suspensions.

A single lock controls all drawers. Locks are core removable and are master keyed (order master keys separately). An interlock system keeps more than one drawer from opening at a time. Hanging file folders hang on the full height drawer sides eliminating the need for hanging folder frames. Durable powder-coat paint finish available in five colors. FOB Shipping Point.
